Meet Remootio

The first end-to-end encrypted Wi-Fi and Bluetooth enabled smart remote controller, that lets you control and monitor your gates and garage doors using your smartphone. Simply connect Remootio to your gate or garage door using a pair of included cables and you will be able to control and monitor your gate or garage door from your smartphone or your smart home hub (such as Alexa or Google Home).

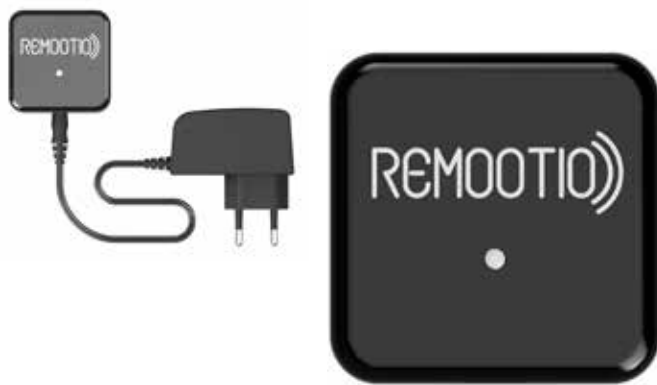

Three ways to connect

Bluetooth: You can control your gates even when WiFi is not available at your gates or when the internet service is down.

Wi-Fi: Connect Remootio to your home WiFi and control your gates from anywhere within your house. In this mode, no data goes through the internet.

Internet: You can control and monitor your gates from anywhere in the world.

It also works in parallel with your traditional remote controller
